# Project Profile

Ted Stevens Anchorage International Airport
Anchorage, AK

System Features

As the largest airport in Alaska, Ted Stevens Anchorage International Airport hosts over 5 million passengers each year. To accommodate the traffic, the airport built Terminal C. Ford was hired to install a new digital paging, audio and visual system in the terminal and integrate it into the airport's existing system.

- New digital paging stations were installed so employees could quickly and easily make announcements and provide information to travelers
- High output in-ceiling speakers throughout the terminals and concourses provide clear sound over ambient noise so travelers can listen easily
- HD displays provide more viewing angles for passengers to look at flight information
