

# Project Profile

Spokane International Airport  
Spokane, WA

## System Features

When Spokane International Airport added Concourse C to help accommodate the 3 million travelers that pass through each year, the 37,800 SF location needed updates to their AV infrastructure including paging stations and overhead speakers. Ford was contracted to facilitate the audio upgrades and install new paging stations and speakers while integrating the equipment with the current system.

- New digital paging stations were installed so employees could quickly and easily make announcements and provide information to travelers as they move from gate to gate
- High output over-head speakers throughout the terminals and concourse provide a variety of options for making announcements to specific areas or gates

## Participants

### Owner

Spokane County / City of Spokane

### AV Contractor

Ford Audio-Video Systems
